

# HPC @ University of Bern

## ubelix – Uni BErn LiNuX cluster

Andres Aeschlimann  
University of Bern

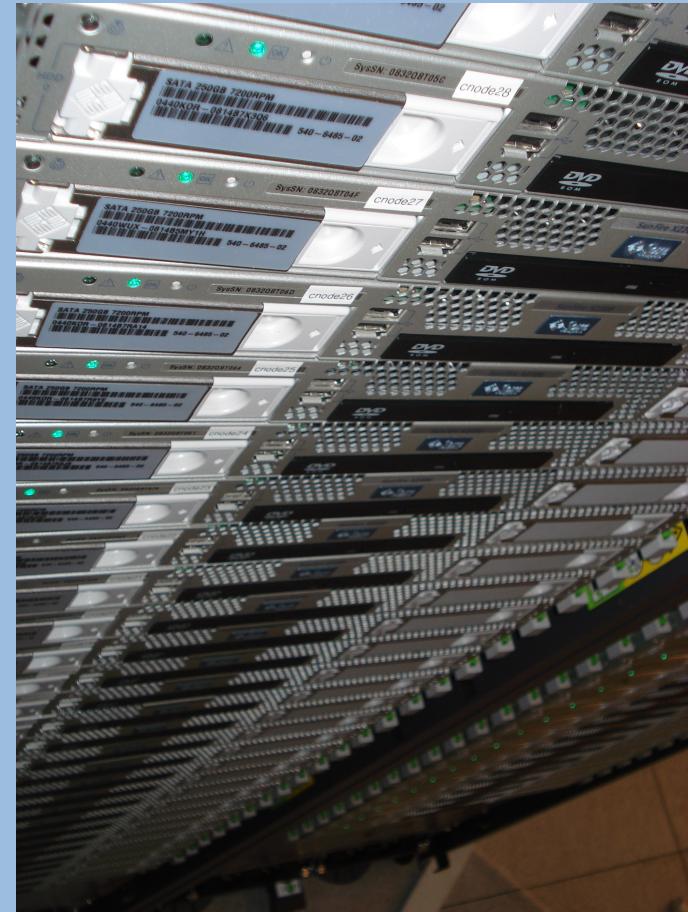

# Purpose

- > “This Grid HPC infrastructure is primarily designed to support the researchers at the Campus. They should use their time doing research and not be bothered by deploying a Grid HPC infrastructure.”

# Some facts

- first Linux Cluster was installed in 2001 (1 master and 32 single core nodes)
- continuously expanded to ~1000 cores in >200 nodes today
- Dual- and quadcore worker nodes
- Mostly Opterons, increasing # of Intels (Nehalem)
- several suppliers (mostly SUN, but currently also IBM and some Dell)
- < 100kW

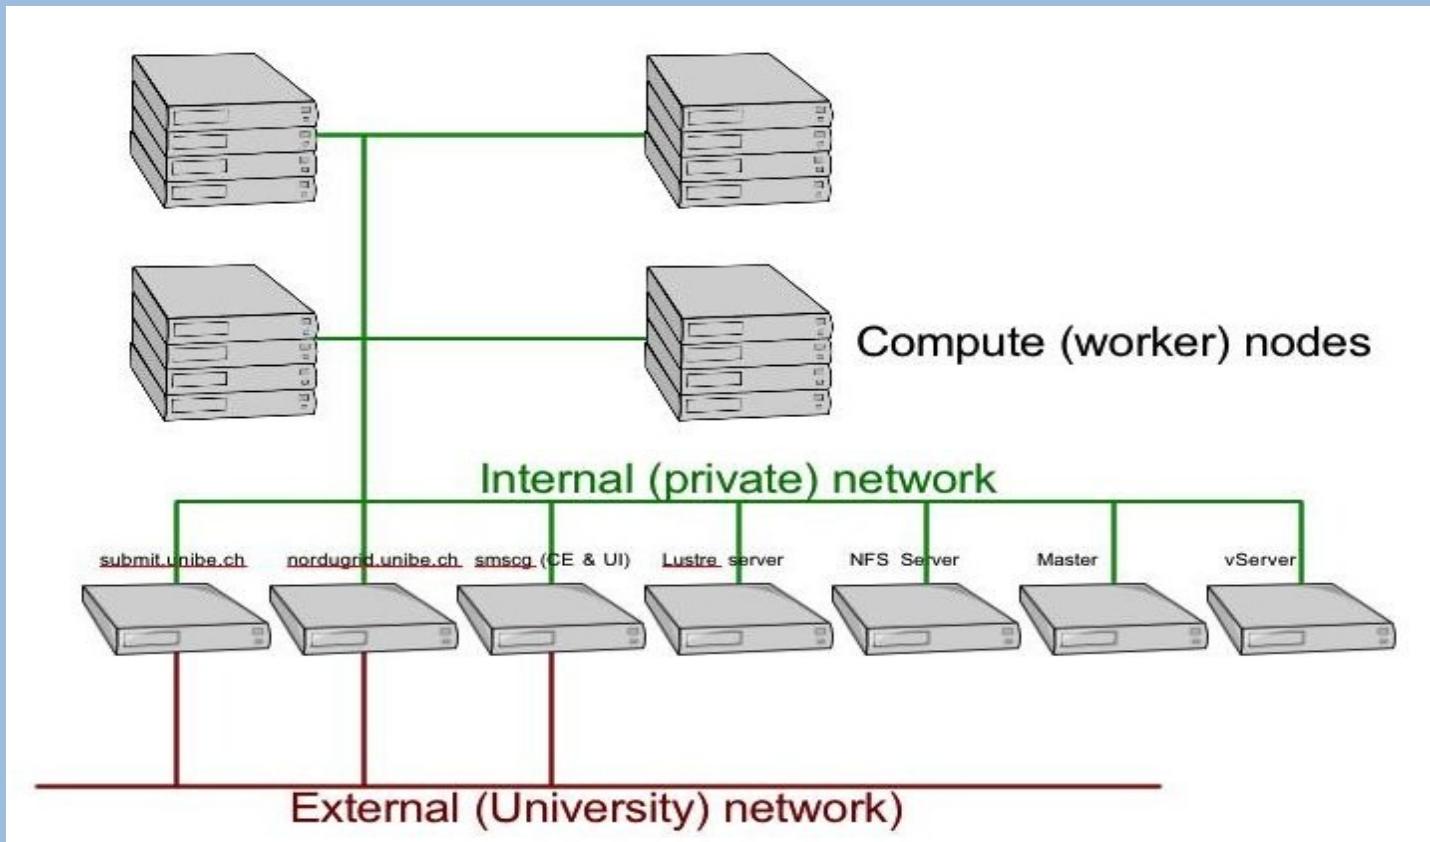

# Some facts (cont.)

- > Gentoo Linux  
[www.gentoo.org](http://www.gentoo.org)
- > Kernel 2.6.22/2.6.27
- > 2TB memory, 50TB disk
- > Lustre filesystem: 1.8.1
- > Sun Grid Engine 6.2
- > Gb Switch
- > Currently no Infiniband Switch

# Schema

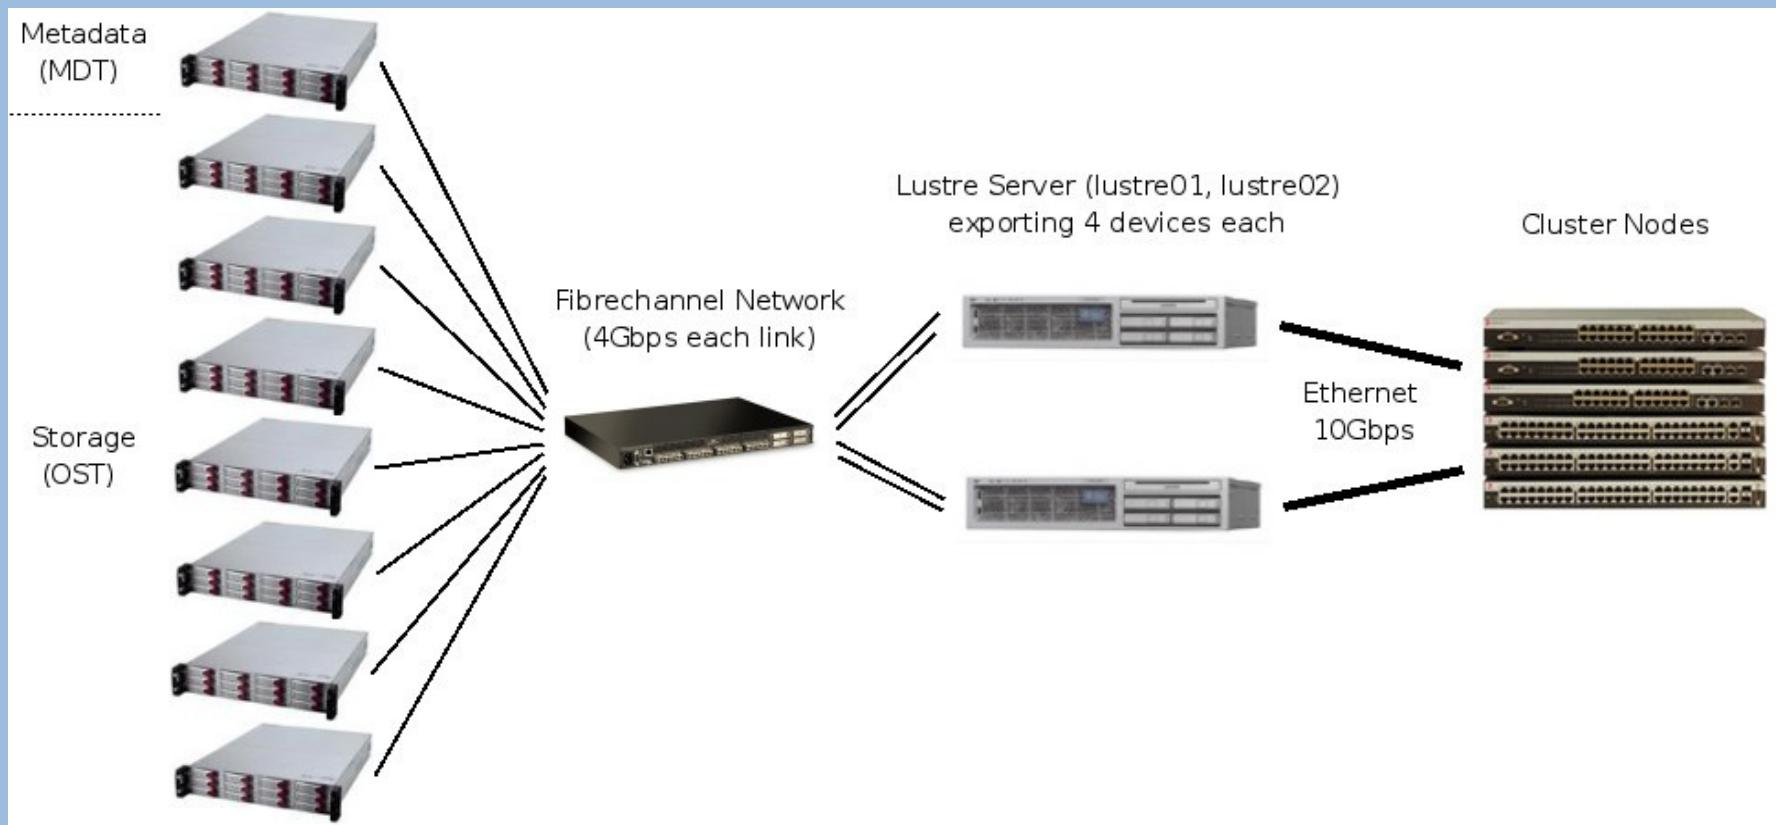

# Internal (private) network

- > TCP/IP
- > Stackable Switches (~40Gbs)
- > „normal“ Gigabit Ethernet on the worker nodes
- > 10GE Ethernet for high throughput servers

# Lustre@ubelix

- > Filesystem
- > lustre01@tcp0:lustre02@tcp0:/homefs 44T 14T 29T 33% /home/ubelix
- > ~1 GB/s sustained write performance

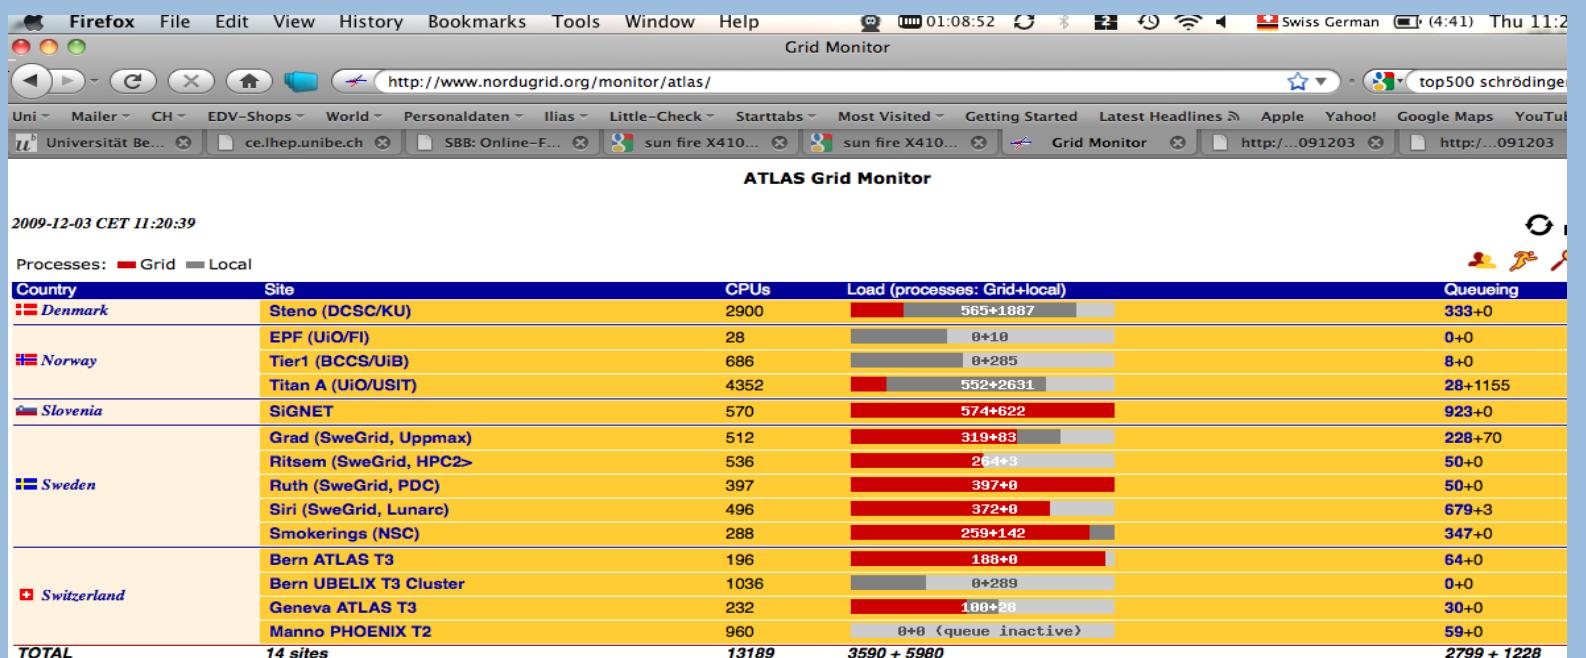

# Application portfolio (local users)

- > HE Physics
- > Astronomy
- > Computational and Molecular Population Genetics Lab
- > Space Research Physics
- > Computer Vision and Artificial Intelligence
- > Chemistry and Biochemistry
- > ...

# Applications from remote:

- > ATLAS: high energy physics application developed for the LHC experiment at CERN
- > RSA768: cryptographic application
- > NAMD and GROMACS: biochemistry applications
- > GAMESS: biochemistry application (work in progress)
- > ...

# Other clusters @ UniBE

HPC-CH Kick Off Meeting - UZH - 2009-12-03

## The LHEP UNIBE ATLAS T3 2009

- A ROCKS Cluster with ~200 cores (Sun Fire X2200 1U dual quad cores) and ~50 TB on CentOS. Located in same room as ID UNIBE cluster.
- Mainly serves local and remote ATLAS scientists. Backfilled with remote users and applications.
- **Speciality: Access only via ARC clients, i.e. remote and local users have the same interface.**
- Expect ~80 kCHF/year upgrades.
- May go to Lustre in 2010, now nfs.

<http://ce.lhep.unibe.ch>

## Other clusters @ UniBE (cont.)

- > Theoretical Physics (~200 cores, with interconnect)
- > Climate Physics (~100 cores)
- > Space Physics (~100 cores)
- > Chemistry (~100 cores, with interconnect)
- > Computational and Molecular Population Genetics (~60 cores)
- > ...
